Referral to Acute Rehabilitation
Upon physician request, the Rehabilitation Admission Nurse will evaluate your rehabilitation needs and address the requirements for admission. This includes providing you and your loved ones with information about the Rehabilitation Center and obtaining approval through your insurance company.

Treatment Plan
The Acute Rehabilitation Center offers a safe and caring atmosphere for patients and caregivers to learn to manage self-care, mobility, communication, cognitive skills, and other daily activities. The Rehabilitation team will assess your needs as a patient and develop a daily treatment plan with attainable goals.

Discharge Planning
It is our intention to discharge you home safely. Discharge planning begins at the time of admission. A case manager or social worker will assist you and your family with all discharge needs including ordering equipment, home care referrals, outpatient therapy, or other services offered within the community.

Visitors
Your family and caregivers are encouraged to be part of your rehabilitation. Please check with the treatment team before observing or participating in a treatment session. Some restriction may be necessary depending on the injury or illness of the patient. Visitors are always welcome.

What to Bring
During the day our patients wear comfortable clothes. Family is requested to launder clothing. Suggested items to bring include:
- Three changes of loose-fitting clothing
- Sturdy, low-heeled shoes
- Undergarments
- Robe and nightclothes
- Sweater or jacket

Meeting the Needs of the Patient
Our program is designed to meet the needs of patients at various stages of their recovery. We will assist you in your progress from the acute hospital stay into your rehabilitation and back into the community.

The Acute Rehabilitation Center offers professional clinical skills to assist you in your recovery.
